## Education

*Sep 2014— Jun 2018*

**Degree:** Bachelor of Engineering in Information and Communication
**Where:** University of Electronic Science and Technology of China, Chengdu
**GPA:** 3.51 of 4.0

- Top 13% in the same-year group
- Thesis: Pedestrian indoor positioning based on inertial navigation system
- Advisor: Prof. Zhuoling Xiao

*Sep 2018— Jun 2021 (expected)*

**Degree:** Master of Engineering in Electronic and Communication
**Where:** University of Electronic Science and Technology of China, Chengdu
**GPA:** 3.71 of 4.0 (Major)

- Top 4% in the same-year group
- Thesis: Pedestrian navigation based on multi-source data fusion
- Advisor: Prof. Zhuoling Xiao

## Research Interests

- Ego-motion Pose Estimation
- Learning-based Detection & Classification
- Data Fusion Algorithms
- Application of Attention Mechanism

## Research Experience

*October 2018—Now*

**Project:** Research on self-contained pedestrian navigation based on micro-IMU (NSFC)

**Advisor:** Prof. Zhuoling Xiao

**Contributions:**

- Collected and labeled the foot-mounted inertial data of 87 trajectories with the total length of 15km. This data set contained 27 individuals in various indoor and outdoor scenes.
- Realized the ZUPT-aided INS, and improved the update algorithm by applying the attenuation factor to the KF.
- Devised a novel adaptive zero velocity detector leveraging the RCNNs, and its symmetrical framework enhanced the performance of detection, which outperformed the competing approaches in both accuracy and robustness.

*May 2019—Now*

**Project:** Research on evolutional autonomous positioning technology based on data fusion (NSFC)

**Advisor:** Prof. Zhuoling Xiao

**Contributions:**

- Devised a learning-based VO, and a loose-coupled VIO leveraging the KF. The penalty factor was used in the update process, which avoided the excessive correction on the translation estimation.
- Applied the attention mechanism to the end-to-end VO framework, which enabled the model to concentrate on pixels in distinct motion.
- Developed an end-to-end loop closure detector, which contained the CNN-based feature extraction, and adaptive weighted similarity calculation.
- Researched the evolutional data fusion algorithm of inertial data and GNSS signals leveraging the deep reinforcement learning.

## Publications

**Technical experience**
Keras/Pytorch, Python, Matlab, ROS, LaTeX
Teaching Assistant of *The Advanced Application of IOT* (Undergraduate course) (2018)

**Honors and awards**

- First-class academic scholarship × 2 (2019-2020)
- Gold award in *China Graduate Electronics Design Contest* (Top 1%) (2020)
- Gold award in *China College Students' 'Internet +' Innovation and Entrepreneurship Competition* (Sichuan district competition) (2020)
- Silver award in *China Graduate Electronics Design Contest* (Southwest district competition) (2020)
- People scholarship of UESTC × 4 (2015-2018)
